Jared Gridley

Reflection:
1. I should have taken better notes during the reasoning lecture. I found that I had to go back and review a lot of the material before I could confidently do the homework. It all looked familiar, but I still had to go back to the slides.
2. Overall, I think you did good for this HW. Maybe in Lecture doing a more complicated problem with multiple parts, just so that we get exposed to something that isn't very simple.
3. I certainly have a deeper appreciation for setting pre-conditions and post conditions. Especially in problem 6, when there was the part of the if statement that will never get run. I usually think that whenever I write code, that each statement has a specific case or set of cases, but with the preconditions and postconditions, I see that it can help you debug and also make your code more concise, like eliminating statements that will never be called or used.
